What's Bugging You?

Viral respiratory illnesses are common cold-weather culprits.

Respiratory viruses spread throughout the year. This winter, you're more likely to contract one of four viruses: the common cold, COVID-19, the flu or respiratory syncytial virus (RSV). All can have similar symptoms, including:

- + body aches
- + cough
- + fatigue
- + fever
- + nasal congestion
- + sore throat

Getting your annual flu shot and an updated COVID-19 vaccine are a great way to prevent serious illnesses. Now, adults 60 and older can also get an RSV vaccine. Frequent handwashing and wearing masks in crowded spaces can lower your risk of getting sick, too.

WHEN YOU NEED A PROVIDER

Most seasonal respiratory illnesses improve within a couple of days. However, if you or your child is experiencing any of the following symptoms, it's time to call a provider:

- + chest or abdominal pain
- + dehydration
- + high fever even after medication
- + mental confusion
- + trouble breathing
- + uncontrollable vomiting

Also, if you are pregnant or have a chronic health condition and get sick, call your provider right away. Children younger than 2 should also see a pediatrician when symptoms appear.

Find a CHRISTUS St. Vincent primary care provider near you at christushealth.org/find-a-doctor.

Meet Our New Providers

CHRISTUS St. Vincent is a private, faith-based, not-for-profit hospital. Located in Santa Fe, New Mexico, CHRISTUS St. Vincent is the only Level III Trauma Center in North Central New Mexico. With more than 430 physicians and advanced care practitioners covering 39 services and lines of specialty care, CHRISTUS St. Vincent serves more than 300,000 area residents. Our healing ministry is to improve the health and well-being of the communities we serve.

CHRISTUS St. Vincent complies with applicable federal civil rights laws and does not discriminate on the basis of race, color, national origin, age, disability or sex. For more information, see link on our homepage at stvin.org.

New Mexico's

'Most Awarded Hospital'

CHRISTUS St. Vincent has earned multiple accolades for clinical excellence, according to new research released by Healthgrades, the leading resource consumers use to find a hospital or doctor.

Among CHRISTUS St. Vincent's distinctions are two Specialty Excellence awards acknowledging the hospital currently ranking among the top 5% of hospitals nationwide for both Cardiology and Coronary Intervention Services, and six five-star awards for services including Coronary Interventional Procedures, Treatment of Heart Attack, Treatment of Heart Failure, Upper Gastrointestinal Surgeries, Colorectal Surgeries and Treatment of Sepsis.

These achievements place CHRISTUS St. Vincent in the upper echelon of hospitals nationally for specialty care and reflect the hospital's commitment to consistently delivering the best care possible.

"Healthgrades congratulates CHRISTUS St. Vincent for being a national leader and demonstrating a deep commitment to providing high-quality care to all patients," says Brad Bowman, M.D., chief medical officer and head of data science at Healthgrades. "Your dedication, expertise and tireless efforts have not only set you apart but have also positively impacted the lives of countless patients."

Lillian Montoya
President and CEO

"I am so very proud of our team at CHRISTUS St. Vincent," says Lillian Montoya, CHRISTUS St. Vincent president and CEO. "We're always moving toward achieving that next level of excellence for our community – and that makes every day exciting – but to excel at a national level in so many areas, to be New Mexico's most awarded hospital and named one of the top 100 hospitals in America for coronary intervention, that's special. Our entire community can be proud of the care we have right here in Santa Fe."

Healthgrades Specialty Excellence Awards Name CHRISTUS St. Vincent "One of America's 100 Best Hospitals for Coronary Intervention" and New Mexico's "Most Awarded Hospital for 2024"

Sophisticated GI SURGERY

CHRISTUS St. Vincent ensures patients who need gastrointestinal surgery don't have to look outside Northern New Mexico for the most up-to-date technologies and techniques.

Operating Safely

Whether you're having a gastrointestinal procedure, cardiac or orthopaedic surgery or another kind of operation, you want it to be safe. Key investments by CHRISTUS St. Vincent help keep patients safe in the operating room.

"One of the risks of surgery is retaining tools or materials in the body cavity after the operation," says Whitney Lewis, RN, BSN, MHA, director of surgical services at CHRISTUS St. Vincent. "We have technology to alert us to remove foreign objects."

In addition, CHRISTUS St. Vincent is building a new sterile processing department, a more than \$4 million project that should be completed in 2024. Located next to the operating rooms, the department will feature all of the latest technologies to sterilize and track surgical instruments.

You depend on a healthy digestive system to fuel your life. When surgery is necessary to help get your gastrointestinal tract back on track, you can turn to CHRISTUS St. Vincent for leading-edge care, including minimally invasive surgery using the da Vinci Surgical System. CHRISTUS St. Vincent is home to two da Vinci robotic platforms, including the newest, the da Vinci Xi.

"Our most common robotic gastrointestinal surgery procedures include colon resections, hernia repairs and gallbladder removals," says Whitney Lewis, RN, BSN, MHA, director of surgical services at CHRISTUS St. Vincent. "Using the robotic-assisted interface, our surgeons make much smaller incisions, and patients enjoy quicker recovery times compared with nonrobotic-assisted procedures."

HIGH-TECH TOOLS AND HARD-TO-FIND OPTIONS

CHRISTUS St. Vincent is one of just a few hospitals in New Mexico to offer endoscopic retrograde cholangiopancreatography, or ERCP, a procedure to diagnose and treat conditions of the bile and pancreatic ducts. Endoscopic ultrasound – another procedure at CHRISTUS St. Vincent that's not widely available throughout the state – allows physicians to look for problems in the digestive tract.

The CHRISTUS St. Vincent team uses several advanced technologies as part of gastrointestinal procedures. They include SpyGlass, a tool that enhances the view of the digestive tract during outpatient endoscopic procedures, potentially helping patients avoid surgery. Another tool, truFreeze, is a spray that uses liquid nitrogen to destroy cancerous and noncancerous tissue in the esophagus.

As surgical technology continues to advance, CHRISTUS St. Vincent will stay at the forefront of progress by incorporating new tools that can improve patients' treatment and quality of life.

"The surgery team is a dedicated family," Whitney says. "We take such pride in what we do every day, and that's reflected in our patients' high satisfaction scores. We're excited about the future of gastrointestinal surgery at CHRISTUS St. Vincent."

L to R: Lucrecia Miller RN, MSN, Clinical Manager, Emergency Department, Jeremy B. Willard RN, Sepsis Coordinator, Emily Brooks RN, BSN, CEN, Sepsis, M. Dominick Armijo, RN, CDPI Nurse Manager, Knox Kinlaw, MD, Board/Emergency Department Medical Director, Claudine Gajegos, RN, MSN, Director of Emergency Services, Theresa Ronan, MD, FACP, Quality Medical Director, Paula Gonzales, Assistant to the Emergency Department Medical Director

Recognition for Sepsis Care

With participation from engaged staff in all departments of the hospital, CHRISTUS St. Vincent is working to achieve the very best care possible for the community.

When you have an infection, your body starts working to fight it. Chemicals are released to launch your immune response and stop the invading microorganisms. An extreme response known as sepsis can overwhelm the body and lead to organ failure and even death.

CHRISTUS St. Vincent is 100% committed to providing outstanding sepsis care and has achieved recognition for performance improvement, sepsis protocol and treatment of sepsis.

"This is vital to achieve because we know that the early identification and treatment of sepsis leads to better patient outcomes and reduced mortality," says Theresa Ronan, M.D., FACP, quality medical director at CHRISTUS St. Vincent. "Sepsis is a leading cause of death in hospitals. Therefore, it is imperative that we act quickly and efficiently in treating these patients."

SEPSIS PROTOCOLS IN PLACE

The team at CHRISTUS St. Vincent has a number of initiatives in place to achieve this recognition.

- + **Nurse-initiated order set** – Emergency medicine nurses have a nurse-initiated order set that allows them to start sepsis care for patients upon identification of the sepsis criteria. This is important because outcomes improve with quick identification and treatment of sepsis.
- + **Physician-initiated order set** – Sepsis care includes a large bundle of tests and treatments including blood cultures, lactate levels,

intravenous fluid administration and antibiotics, among many others. Having an order set available to physicians ensures no item of the bundle is omitted. These orders help guide timely care.

- + **Electronic health record (EHR)** – The EHR aids the medical team in identifying patients at high risk for sepsis. The EHR can automatically identify a collection of signs and symptoms that indicate a patient may be meeting sepsis criteria. From this information, the sepsis nurse coordinator is able to review the patient's care in real time and alert front-line health care workers of additional steps required in the treatment of the patient.
- + **Continuing education** – Physicians, nurses, techs and nursing assistants receive continuing education on the appropriate identification and treatment of sepsis.

"Sepsis has the possibility of being a life-threatening condition," says Emily Brooks, RN, BSN, CEN, sepsis at CHRISTUS St. Vincent. "Even if the care of a patient with sepsis is perfect, the patient can still be at high risk of a poor outcome. That's why we work hard to ensure the best possible care for our patients."

We are here to take care of you.
For more information about services at
CHRISTUS St. Vincent, visit stvin.org.

What Can I Do About Sepsis?

Taking good care of your overall health can help limit your risk for sepsis.

1

Wash hands regularly and keep cuts covered until they heal.

2

Get recommended vaccines and manage chronic health conditions, such as diabetes and lung disease.

3

Be alert to signs of sepsis: fever, weakness, rapid heart rate, low blood pressure and confusion.

Board-certified and fellowship-trained interventional cardiologist Camila Maestas, M.D., with a patient

Your Heart Is in Our Hands

From advanced imaging to comprehensive heart attack care, the cardiac team at CHRISTUS St. Vincent offers a complete array of cardiac services to meet every need.

At CHRISTUS St. Vincent, our experienced team of cardiac experts is dedicated to helping your heart be as healthy as it can be. This commitment to excellence has been nationally recognized, with the team receiving several accolades from Healthgrades for 2024.

"We are deeply committed to providing excellent coronary intervention and cardiology services to our patients," says Timberly Miller, MBA-HM, BSN, RN, director of cardiology & pulmonology/intensivists at CHRISTUS St. Vincent. "Our highly skilled and experienced health care professionals, including cardiologists, nurses and support staff specializing in cardiovascular medicine, complete rigorous training and stay updated with the latest advancements in the field to provide our patients with the best possible care."

CHRISTUS St. Vincent is equipped with state-of-the-art facilities and advanced medical technologies that enable accurate diagnosis, effective treatment and optimal patient outcomes.

"We are home to the only cardiac catheterization lab in Northern New Mexico and offer advanced imaging systems and other cutting-edge equipment," Timberly says. "Having these resources allows us to perform precise and timely interventions and procedures, reducing risks and improving patient recovery times."

A LEADER IN INTERVENTIONAL CARDIOLOGY

If you have symptoms or are diagnosed with a heart condition, you might be referred to an interventional cardiologist, an expert in minimally invasive procedures to diagnose and treat certain types of heart conditions. These types of procedures are done with a thin tube called a catheter, which is inserted into a blood vessel through a tiny incision and guided to your heart.

Cardiac catheterization is often used to diagnose heart conditions for patients who are showing symptoms of a problem. Cardiologists can use it to ensure heart valves are working properly or assess the coronary arteries to determine whether there are any blockages. They might also use ultrasound imaging or inject dye into the coronary arteries to determine whether there are any blockages.

In addition to diagnosis, cardiac catheterization is also used to repair heart problems. Common procedures include:

- + **Balloon angioplasty.** A surgeon passes a tiny balloon through a catheter and guides it to your heart, where the balloon inflates and opens a blocked or narrow artery, restoring blood flow.
- + **Stenting.** This is often done at the same time as a balloon angioplasty. The surgeon places a tiny wire mesh tube, called a stent, inside a clogged artery, helping the artery to stay open. When combined with angioplasty, the procedure is called percutaneous coronary intervention (PCI).

WORLD-CLASS HEART CARE

When a heart attack happens, time is of the essence.

"We take a comprehensive approach when treating patients for a heart attack," Timberly says. "This includes prompt recognition and diagnosis, rapid response and stabilization, cardiac catheterization procedures, medication management, monitoring, recovery, rehabilitation programs, and ongoing follow-up care."

The first step in heart attack care is quickly recognizing and diagnosing the condition. The staff at the emergency department at CHRISTUS St. Vincent are highly training in recognizing the signs of a heart attack, and the ED features state-of-the-art diagnostic tools.

As soon as a heart attack is diagnosed, the team follows a rapid response protocol to minimize the time between a patient's arrival at the ED and the start of treatment. This includes activating the cardiac catheterization lab team, which consists of interventional cardiologists as well as nurses and technologists who specialize in cardiac catheterization procedures. The team determines the best course of treatment, which is often PCI. The average time of the arrival of a patient to the time the procedure is done (also called "door-to-balloon time") is 66 minutes – well below the American Heart Association and American College of Cardiology's recommended door-to-balloon time of less than 90 minutes.

After the initial treatment for a heart attack, recovery and rehabilitation become the main focus.

"The hospital provides a comprehensive cardiac rehabilitation program to improve patients' cardiovascular health, reduce the risk of future heart problems and help them regain strength and confidence," Timberly says. "This program includes supervised exercise sessions, education on heart-healthy lifestyle modifications, dietary counseling and emotional support through our weekly support group."

In addition, the team emphasizes the importance of ongoing follow-up care after a heart attack, collaborating with patients to develop personalized plans. These may include regular checkups, medication management, and diagnostic tests or procedures when necessary.

Janelle Garcia, RN, left, and Treadmill Technician Aleza Vargas, right

HELP FOR HEART FAILURE

Heart failure, or congestive heart failure, occurs when the heart fails to pump enough blood for your body's needs. While it doesn't mean that the heart has stopped working, it is still a serious condition that requires timely care.

"We offer a comprehensive heart failure program that focuses on providing individualized care and helping patients manage their condition," Timberly says. "The goal is to help patients avoid hospitalizations and readmissions by identifying the underlying causes of heart failure and developing effective treatment plans."

Some of the ways the team treats heart failure include:

- + **Advanced diagnostic testing.** Tests such as echocardiograms, stress tests and other advanced cardiac imaging help physicians diagnose and determine the cause of heart failure.
- + **Lifestyle modifications.** The team also educates patients about healthy lifestyle changes necessary to manage heart failure through regular clinic visits, phone calls and a weekly cardiac support group.
- + **Medication management.** The team works closely with the Medication Management Clinic to ensure patients receive the appropriate medication and educates patients on the importance of proper adherence.
- + **Monitoring and follow-up care.** Patients with heart failure can participate in the cardiac rehabilitation program, and the team follows up with patients regularly for checkups, blood tests and other diagnostic testing to ensure treatment is working well.

LOOKING AHEAD

Benjamin Remo, M.D., FACC

The cardiac team is continually looking for ways to expand services and provide the highest quality of care to the community. Electrophysiologist Benjamin Remo, M.D., FACC, joined CHRISTUS St. Vincent in February 2023 and will be expanding the EP procedures he provides to diagnose and treat arrhythmia in the coming year. Also in 2024, satellite clinics will be added in remote areas of Northern New Mexico.

"CHRISTUS St. Vincent is also looking to add cardiac MRI and CT angiography, which can provide detailed insights into cardiac structure and function, aiding in precise treatment planning," Timberly says. "We will continue to integrate advanced technologies and invest in tools that enable more accurate diagnosis and improved patient outcomes."

To make an appointment with a cardiac specialist at CHRISTUS St. Vincent, visit christushealth.org/find-a-doctor.

Keep Your Heart Strong

Having a healthy heart is a vital part of your overall wellness. To help keep this important muscle beating strong, follow these tips:

- **Eat a heart-healthy diet.** Make sure you eat plenty of fruit, veggies, whole grains and lean protein, and limit sodium and added sugars.
- **Follow an exercise routine.** Strive to get at least 150 minutes of moderate-intensity exercise every week.
- **Maintain a healthy weight.** Talk to your provider about starting a healthy weight-loss plan if you are overweight.
- **Manage conditions.** If you have been diagnosed with a health condition that raises your risk for heart disease, such as high blood pressure or diabetes, follow your provider's guidance and take medications as prescribed.
- **Don't smoke.** If you smoke, talk to your provider about how you can quit.

Contact your provider if you experience any of the following signs of a heart problem:

- Chest pain brought on by physical activity
- Dizziness and fainting
- Fast heartbeat
- Fatigue
- Pounding or pressure in the chest
- Shortness of breath that can cause anxiety
- Swelling in your foot, ankle, stomach or neck vein

CHRISTUS St. Vincent Welcomes Board-Certified Breast Surgeon Amani Jambhekar, M.D., MBA

Amani Jambhekar, M.D.

CHRISTUS St. Vincent is pleased to announce that Amani Jambhekar, M.D., has joined the CHRISTUS St. Vincent Regional Cancer Services team.

Dr. Jambhekar is a highly skilled and compassionate surgical breast oncologist who is committed to providing comprehensive and personalized care. Her expertise in breast health and surgical interventions will address a critical need within the Northern New Mexico community, ensuring that patients receive the highest quality of care close to home.

Dr. Jambhekar earned a Bachelor of Arts in English and a Bachelor of Science in psychology and cell and molecular biology at Tulane University in New Orleans, Louisiana. She then earned her Doctor of Medicine at The University of Texas Health Science Center at San Antonio in San Antonio, Texas.

She completed her residency in general surgery at the NewYork-Presbyterian Brooklyn Methodist Hospital in Brooklyn, New York. She also completed a fellowship in breast surgical oncology at Columbia University Medical Center in New York, New York.

Dr. Jambhekar also earned a Master of Business Administration from the Kelley School of Business at Indiana University in Bloomington, Indiana, and was named one of the top 20 graduates in the country.

"I am excited to join CHRISTUS St. Vincent Regional Cancer Center, and I look forward to contributing to the health and wellness of our community by expanding our breast health services," Dr. Jambhekar says. "My goal is to provide compassionate and comprehensive care to patients, empowering them to make informed decisions about their health."

In her role, Dr. Jambhekar will lead the collaborative efforts of a multidisciplinary team of health care providers to ensure that patients receive a comprehensive care plan tailored to their unique needs. CHRISTUS St. Vincent remains committed to delivering patient-centered health care that goes beyond treatment to encompass support, education and wellness.

"With the hiring of Dr. Jambhekar, CHRISTUS St. Vincent Regional Cancer Center is now able to expand our services and offer even more comprehensive care for women with benign breast disease as well as breast cancer," says Andrea Teague, M.D., vice president of Cancer Services for CHRISTUS Health. "We are excited to be able to offer the only comprehensive breast care in Northern New Mexico at this time. With Dr. Jambhekar and a team of medical oncologists, radiation oncologists, plastic surgeons, social workers and nurse navigators, along with the availability of clinical research trials, we are very excited to provide this integrated care to the patients and families we serve."

Native Patient Navigation Services

CHRISTUS St. Vincent Regional Cancer Center Native Patient Navigator Shayna Grandbois-Herrera (Turtle Mountain Chippewa) has 12 years of experience in the medical field, 10 of those working at CHRISTUS St. Vincent Regional Cancer Center. Her many roles at the cancer center have included leadership positions as medical assistant supervisor and medical office manager. Shayna has had her own experience navigating Indian Health Services (IHS) and understands the challenges that can accompany being referred to care outside of IHS. She is passionate about assisting Native Americans in Northern New Mexico with navigating their diagnoses and treatment journeys, while acting as a liaison between IHS, the Cancer Center, and other providers and community organizations.

"I harbor a profound and unwavering commitment to delivering outstanding health care services to Native American individuals engaged in the arduous fight against cancer," Shayna says. "I believe my many years of experience have equipped me to fulfill this significant responsibility and role."

For inquiries regarding native patient navigation services, contact Shayna at (505) 913-8911.
